CFP STUDY REPORT: MC88CM2

Issued according to ISO 14067:2018

Result verified ref to ICMQ certification nr. CFPSA281 – 27/03/2024

1. FOREWORD

This report is part of the procedures and documents of the LCA tool and, in particular, reports the data relating to the CFP of the specific product being analyzed.
The information contained in this specific product CFP study report must therefore always be read together with the " GAV_LCA Tool General Study Report_2022 data_rev2". They are therefore very concise on a discursive level and are focused above all on the quantification of the CFP of the product under analysis.

2. GOAL AND SCOPE

The objective of the study is the quantification of the product Carbon Footprint (CFP) related to the MC88CM2 device, of the Safety Magnetic Actuator category, with a power of 0 W and a lifespan of 10 years.

3. INVENTORY ANALYSIS

The device under study is the MC88CM2 model with a total weight of 0,041 kg, including packaging.
Reference tool for the calculation: LCA tool_data 2022_GAV Kaunas_rev1 dated 16/02/2024.

4. IMPACT ASSESSMENT

As per to chapter 4.1 of the "GAV_LCA Tool General Study Report_2022 data_rev2".

4.1 Total CFP

Below is the overall quantitative impact of the CFP of the product MC88CM2 device.

CFP ($kg\ CO_2e$/device)	Production UPSTREAM ($kg\ CO_2e$)	Production CORE ($kg\ CO_2e$)	Distribution DOWNSTREAM ($kg\ CO_2e$)
TOTAL 7,08	0,32	6,52	0,24

4.2 Other GHG emission and removals constituting CFP

GHG VALUES CONSTITUTING THE CFP	*UNIT OF MEASURE*	*DEVICE* MC88CM2
GHG emissions and removals from fossil carbon sources and sinks	*kg CO_2e/U.F.*	7,06
GHG emissions from biogenic carbon sources	*kg CO_2e/U.F.*	0,02
GHG emissions and removals resulting from dLUC	*kg CO_2e/U.F.*	0,01
GHG emissions from aviation	*kg CO_2e/U.F.*	0,21
